Product Name

FoodBridge – Zero-Waste Food Donation Platform

Target Audience

FoodBridge is designed for:

1) Primary

- Restaurants
- Bakeries
- Individuals who have surplus food available for donation
- Local charities
- Beneficiary organizations that need access to available food donations

2) Secondary

- **Admin:** Manages users and monitors donation activities.
- **Final Beneficiaries:** People who receive the donated food through charities, even if they do not use the platform directly.

Summary of the Product

For restaurants, bakeries, individuals, and local charities that need a simple and organized way to redistribute edible surplus food, **FoodBridge** is a web-based food donation platform that connects donors with beneficiary organizations and supports the donation process from listing to collection. Unlike unorganized or manual donation coordination, **FoodBridge** provides a centralized platform where donations can be listed, requested, managed, and tracked efficiently, helping reduce food waste while making food donation more accessible and organized.

Main Problem / Need

Large amounts of edible surplus food may go to waste while charities and beneficiary organizations are looking for food donations. The donation process can also be **difficult to coordinate** because donors and charities may not have a clear and organized way to communicate, request available food, and follow the donation process.

Core Value Proposition

FoodBridge provides a simple web platform that connects food donors with local charities and helps them manage the donation process in one place. Donors can list available surplus food, charities can find and request suitable donations, and both sides can follow the donation status until collection.

Market Differentiation

FoodBridge focuses specifically on the local redistribution of edible surplus food. Instead of only providing general information about food waste or charitable giving, the platform supports the complete donation process, including listing available food, requesting donations, managing requests, tracking donation status, and confirming collection.

An existing alternative is **Ehsan**, the Saudi national platform for charitable work. Ehsan mainly receives financial donations for charitable projects and cases (for example, funding food baskets for families in need). **FoodBridge** is different because it handles in-kind surplus food: the donor lists the actual food with its quantity, expiry time and pickup address, a nearby charity requests it, and both sides follow the donation until it is collected before the food expires.

Stakeholders

Stakeholder	Role / Interest
Donors	Restaurants, bakeries, and individuals who want to donate surplus food.
Charities / Beneficiary Organizations	Organizations that search for and request available food donations.
Administrators	Manage users and monitor donation activities on the platform.
Beneficiaries	People who may ultimately receive the donated food through charities and beneficiary organizations.
Development Team	Designs, develops, tests, and maintains the platform based on project requirements.

Initial Role Distribution

Team Member	Role	Key Responsibilities
مريم القحطاني	Product Owner	Defines the product vision, focuses on customer value, prioritizes the Product Backlog, and prepares donor-related User Stories.
غلا الصويان	Development / QA Team Member	Prepares the Sprint Goal and Sprint Backlog, breaks selected User Stories into technical tasks, estimates task hours, defines the Definition of Done, and prepares charity-related User Stories.
البتول صالح حافظ	Scrum Master	Organizes Scrum meetings, tracks blockers and team progress, documents meeting outcomes, prepares the meeting summary, and develops donation process and tracking User Stories.
ريناد العبداني	Development / QA Team Member	Organizes and reviews the Product Backlog, checks User Story quality and consistency, supports estimation and DEEP criteria review, and prepares admin and supporting User Stories.
